

# CORKSY PRE-SALE OVERVIEW

Welcome to the official Corksy Pre-Sale documentation, your comprehensive guide to participating in one of crypto's most innovative meme token ecosystems. This document outlines how early supporters can acquire \$CORKSY tokens and join a project that uniquely combines NFT collectibles, token rewards, exclusive merchandise, and wine tokenization into a fully gamified brand universe.

 by THE CORKINATOR - FOUNDER & VISIONARY

# PRE-SALE DETAILS AND PARTICIPATION

## TOKEN SPECIFICATIONS

Token Name: Corksy (\$CORKSY)

Blockchain: Solana (with XRP Ledger integration planned for future development)

Total Supply: 10,000,000,000 (10 Billion) tokens

Pre-Sale Allocation: 1,000,000,000 \$CORKSY tokens, representing 10% of the total supply

The fixed price per token will be determined based on the SOL equivalent at launch, ensuring fair market value for all participants. Our first-come, first-served approach guarantees equal opportunity without preferential treatment for bots or insiders.

## TIMELINE AND PROCESS

The pre-sale will commence at a time to be announced on our official X (formerly Twitter) account and Telegram channel. To prevent bot manipulation, the exact start time will only be revealed 5 minutes before launch. The pre-sale concludes either when the full allocation is purchased or at the Founder's discretion based on market conditions.

Participation requires sending SOL directly from your wallet to our designated pre-sale address. We've implemented reasonable limitations with a minimum contribution of 0.1 SOL and a maximum of 10 SOL per wallet to prevent whale dominance and ensure wider community participation.

## HOW TO PARTICIPATE

- Prepare your Phantom or Solflare wallet with SOL
- When pre-sale opens, send between 0.1-10 SOL to:  
`A5cJVyJrSH4bi9mT4zRY5HZzc4wbFydw  
h5HGtt7dui3i`
- Keep your wallet open to receive tokens
- Expect your \$CORKSY airdrop within 72 hours of transaction confirmation

## PRE-SALE BENEFITS

- Early acquisition at fixed favorable rates
- Priority access to the first NFT minting event
- Voting rights in project governance
- Eligibility for exclusive airdrops and rewards

## IMPORTANT CONSIDERATIONS

- No KYC required for participation
- Tokens are sent only to the originating wallet address
- No complicated whitelisting process
- Transaction hash serves as your confirmation

# SECURITY PROTOCOLS AND VERIFICATION

In the rapidly evolving crypto landscape, security remains our paramount concern. The Corksy team has implemented robust security measures to protect our community members during the pre-sale event and beyond. Understanding common scam tactics and following proper verification procedures will ensure your participation remains safe and secure.

## OFFICIAL ADDRESS VERIFICATION

Only send SOL to our verified pre-sale wallet address:

A5cJVyJrSH4bi9mT4zRY  
5HZzc4wbFydwh5HGtt7

dui3i. This address can be cross-verified through our official channels including our website, GitHub repository, and social media accounts.

Any other address claiming to collect funds for the Corksy pre-sale is fraudulent.

## COMMUNICATION PROTOCOLS

The Corksy team will never initiate direct messages requesting sensitive information. We will never ask for your wallet seed phrases, private keys, or request that you connect your wallet to unverified websites. All official communications will come through our established channels only.

## LINK VERIFICATION

Always double-check the URLs you're visiting. Our official website is [corksy.fun](https://corksy.fun) and our GitHub repository can be found at [github.com/Corksyhq](https://github.com/Corksyhq). Be wary of similar-looking domains or slight misspellings designed to trick you into visiting phishing sites.

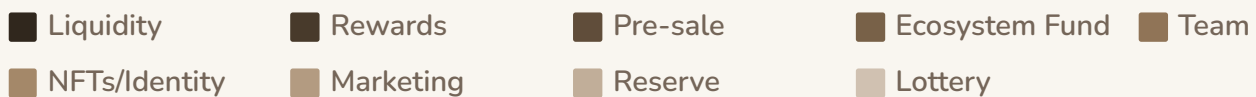

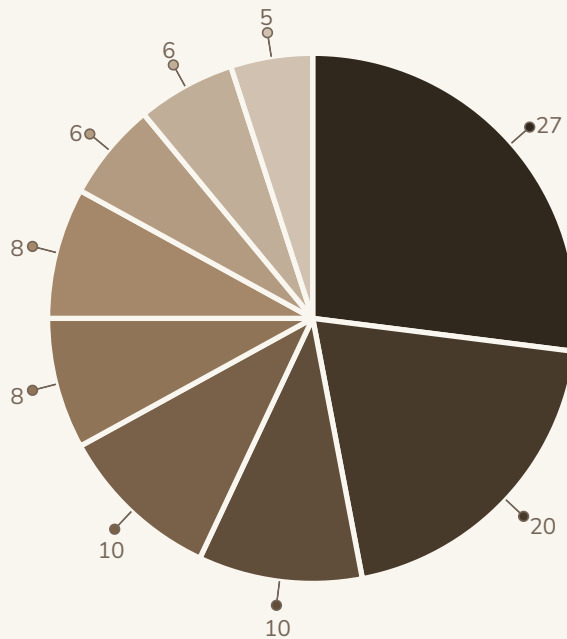

We've implemented multiple security layers to protect the pre-sale process, including smart contract audits, multi-signature wallet requirements for team fund access, and transparent on-chain transaction verification. Additionally, our development team continuously monitors for suspicious activities and will promptly alert the community of any identified threats.

*Remember: Legitimate crypto projects will never rush you into making investment decisions or require you to share sensitive wallet information. Take your time to verify all details before participating in any token sale.*

For maximum security, we recommend using a dedicated wallet for the pre-sale transaction rather than your primary holdings wallet. This compartmentalization approach provides an additional layer of protection for your broader crypto portfolio while participating in new token offerings.

# TOKENOMICS AND DISTRIBUTION STRATEGY

The Corksy tokenomics model has been carefully designed to create long-term value, ensure sufficient liquidity, and reward community participation. With a fixed supply of 10 billion tokens, each allocation serves a specific purpose in building a sustainable ecosystem.

## TOKEN ALLOCATION BREAKDOWN

**Liquidity (27%):** The largest allocation ensures robust trading liquidity on decentralized exchanges, reducing price volatility and enabling smooth transactions for holders. These tokens will be paired with SOL to create deep liquidity pools.

**Rewards (20%):** A substantial portion is reserved for community incentives, staking rewards, airdrops, and participation bonuses. This allocation helps drive engagement and rewards loyal community members.

**Pre-sale (10%):** Available to early supporters at a fixed price, providing initial capital for development while rewarding early believers in the project's vision.

**Ecosystem Fund (10%):** Designated for partnerships, integrations, and ecosystem expansion initiatives that enhance the utility and adoption of \$CORKSY.

**Team & Development (8%):** Allocated to compensate the development team and cover ongoing technical improvements. These tokens are subject to a vesting schedule to ensure long-term alignment.

**NFTs/Identity (8%):** Reserved for NFT-related initiatives, including rewards for NFT holders and integration of tokens with digital identity products.

## DEFLATIONARY MECHANISM

*Corksly implements a powerful deflationary mechanism where 50% of all net profits generated from NFTs, ebooks, merchandise, and in-app purchases are used to buy back and permanently burn \$CORKSY tokens from the open market. This continuous reduction in circulating supply creates natural upward pressure on token value while rewarding holders for their participation in the ecosystem.*

The burn events will be conducted transparently, with each transaction verifiable on-chain and announced to the community. As the ecosystem grows and generates more revenue streams, the burn rate will accelerate, potentially making \$CORKSY increasingly scarce over time.
